

Travelnello

Gruppo 15

Realtà di interesse

Travelnello è un'app sviluppata in React Native che permette di tenere traccia dei propri viaggi in giro per il mondo e di conservarne i ricordi grazie alla possibilità di allegare foto e mantenere un diario di viaggio giorno per giorno.

Core della progettazione

L'app si fonda sull'utilizzo di componenti riutilizzabili e di schermate costruite su quei componenti

La navigazione tra le schermate avviene utilizzando la libreria della community React "stack navigation"

React Native AsyncStorage

React Navigation

La gestione dei dati delle sessioni avviene utilizzando delle classi javascript (secondo lo standard ES6).

La persistenza dei dati tra le sessioni è garantita tramite async storage
